

# Jigsaw Sudoku Puzzle

Peter Jeuken.

Place the pieces so that each row, each column and the diagonals contains the digits 1 through 8.

You must fill in the gray cells by hand.

The remaining 60 cells are to be occupied by the pentominoes.

The pentominoes may be rotated but not flipped.

The digits need not be upright.

Diagonal neighbours (2 locations next to each other in a diagonal direction) never contain the same number
